Summary

Computer Science graduate and **Junior Backend Engineer** with practical experience building RESTful APIs and database-driven applications using Java, Spring Boot, JPA/Hibernate, PostgreSQL, and MySQL. Familiar with microservices architecture, authentication, role-based access control, API testing, Linux, Git, and basic AWS deployment workflows. Experienced in integrating backend systems with Flutter and React applications and familiar with Python-based AI/ML workflows using NumPy and Matplotlib. Passionate about clean architecture, scalable backend systems, and continuous learning.

Professional Experience

06/2025 – 10/2025
Ramallah, Palestine

LogesTechs

Backend Engineer Intern

- Gained practical experience developing and understanding backend applications, RESTful APIs, and database-driven systems.
- Worked with Java, Spring Boot, PHP, Python FastAPI, and GraphQL in backend development and training projects.
- Designed and tested API endpoints and handled request/response workflows and backend integrations.
- Used SQL to query relational databases, analyze data relationships, perform joins, and generate reports.
- Applied Git and GitHub workflows, including repositories, branches, commits, and collaborative version control.
- Worked with Linux environments and gained foundational exposure to AWS services and cloud deployment workflows.
- Explored AI concepts, prompt engineering, and the integration of AI-powered functionality into software applications.
- Used Jira to follow tasks, track development progress, and understand Agile software development workflows.

Education

07/2022 – 07/2026
Birzeit, Palestine

Bachelor of Science in Computer Science

[Birzeit University](#) 

Relevant coursework and practical experience in software engineering, object-oriented programming, data structures and algorithms, databases, backend development, mobile application development, artificial intelligence, machine learning, and distributed computing.

Skills

Programming Languages

● ● ● ● ●

Java, Python, JavaScript, TypeScript, SQL, PHP, Dart, MATLAB

Databases

● ● ● ● ●

PostgreSQL, MySQL, Relational Database Design, Database Relationships, Joins, Queries, CRUD Operations

Cloud & Development Tools

● ● ● ● ●

Git, GitHub, Linux, AWS Fundamentals, Postman, Jira, Firebase

Software Engineering

● ● ● ● ●

Object-Oriented Programming, MVC, Clean Architecture Fundamentals, Agile Workflows, API Testing, Debugging

Backend Development

● ● ● ● ●

Spring Boot, RESTful APIs, JPA/Hibernate, FastAPI, GraphQL, Microservices Fundamentals, JWT Authentication, Role-Based Access Control

Frontend & Mobile Development

● ● ● ● ●

React, Flutter, HTML, CSS, API Integration, State Management Fundamentals

Artificial Intelligence & Data

● ● ● ● ●

AI and Machine Learning Fundamentals, Data Preprocessing, Model Training and Evaluation, NumPy, Matplotlib, Prompt Engineering

Git & GitHub

● ● ● ● ●

Version control, repositories, branching, commits, pull requests, and project collaboration.

Languages

Arabic

Native speaker

English

Good working proficiency

Projects

Student Bag — University Companion Platform

Flutter, Spring Boot, PostgreSQL, Firebase, Docker, AWS

Developed a full-stack university companion platform supporting students, instructors, and administrators. Implemented RESTful APIs, authentication, role-based access control, schedules, tasks, notes, resources, events, notifications, analytics, and AI-assisted features. Integrated the Spring Boot backend with a Flutter mobile application, PostgreSQL database, and Firebase services.

Mobile Application: github.com/aymanaljamal/student-bag-flutter ↗

Backend API: github.com/aymanaljamal/student-bag-backend ↗

Warehouse Inventory and Logistics ERP System

Spring Boot, GraphQL, REST APIs, JPA/Hibernate, MySQL

Developed a backend ERP system for warehouse inventory, product management, order processing, delivery management, and stock tracking. Implemented RESTful and GraphQL APIs using a layered architecture consisting of controllers, services, repositories, entities, and DTOs, with JPA/Hibernate for relational database persistence.

github.com/aymanaljamal/ERB-Warehouse-Product-System ↗

Flat Rental Management System

PHP, MySQL, HTML, CSS, JavaScript

Developed a web-based flat rental management system that enables customers to search for available flats, submit rental requests, schedule appointments, and communicate with property owners. Implemented role-based dashboards for customers, property owners, and managers, along with user management, rental transactions, messaging, and property listing functionality.

Elite Car Rental System

Android, Spring Boot, MySQL, Firebase, JWT

Developed a role-based car rental system with secure JWT authentication, vehicle and booking management, customer and administrator workflows, Firebase integration, and Google Maps functionality. Built RESTful backend services using Spring Boot and integrated them with the Android application.

News Headline Classifier

Python, Machine Learning, TF-IDF, NumPy, Matplotlib

Developed a machine learning application that classifies news headlines using TF-IDF feature extraction, Decision Tree, and Logistic Regression models. Implemented data preprocessing, model training, evaluation metrics, performance comparison, and graphical result visualization.

github.com/aymanaljamal/news-headline-classifier 

Genetic Password Cracker

Python, Genetic Algorithms, Tkinter, Matplotlib

Developed an educational Python application that demonstrates how genetic algorithms evolve candidate solutions to match a target password. Implemented population generation, fitness evaluation, selection, crossover, mutation, and convergence tracking. Created a Tkinter graphical interface for configuring experiments and visualizing algorithm performance.
