Summary

Backend Engineer with a Computer Science background from Birzeit University and practical internship experience at LogesTechs. Experienced in Java, Spring Boot, REST APIs, SQL, GitHub, Linux, and AWS basics, with projects in backend systems, mobile applications, ERP solutions, and AI/ML-based tools. Interested in scalable backend development, clean architecture, and modern software technologies.

Professional Experience

06/2025 – 10/2025
Ramallah, Palestine

LogesTechs

Backend Engineer Intern

- Trained as a Backend Engineer, gaining hands-on experience in backend development, DevOps, and database-driven systems.
- Worked with Spring Boot, Java, PHP, FastAPI, and GraphQL to build and understand modern backend services and APIs.
- Developed practical SQL skills for database analysis, querying, and understanding data relationships.
- Used Linux systems, GitHub version control, and AWS cloud deployment tools during the training.
- Gained exposure to AI concepts, prompt engineering, and AI-powered feature integration.

Education

07/2022 – 07/2026
Birzeit, Palestine

Bachelor's Degree in Computer Science

Birzeit University

Computer Science background focused on software engineering, backend development, databases, mobile applications, and AI/ML basics.

Skills

Java

Object-Oriented Programming, backend development, REST API integration

SQL

Queries, joins, database analysis, data relationships, filtering, reporting

JPA/Hibernate

Entities, repositories, relationships, database mapping, backend persistence

Spring Boot

REST APIs, Controllers, Services, Repositories, JPA/Hibernate, backend integration

PostgreSQL

Database tables, relationships, SQL queries, backend database integration

GitHub

Version control, repositories, branches, commits, project collaboration

REST API Development

API design, endpoints, request/response handling, Postman testing, backend integration

MySQL

Database design, SQL queries, CRUD operations, backend integration

Flutter

Mobile UI development, API integration, state management basics, Firebase integration

Languages

Arabic

Native speaker

English

Good working proficiency

Projects

Student Bag App

<https://github.com/aymanaljamal/student-bag-flutter>

University companion platform built with Flutter, Spring Boot, Firebase, and PostgreSQL. Includes schedules, tasks, notes, resources, notifications, events, analytics, and role-based dashboards.

Student Bag Backend

<https://github.com/aymanaljamal/student-bag-backend>

Backend API for a university companion system using Spring Boot, REST APIs, PostgreSQL, JPA/Hibernate, authentication, notifications, events, resources, and analytics.

Elite Car Rental System

<https://github.com/aymanaljamal/EliteCar-Rental-System>

Car rental system built with Android, Spring Boot, MySQL, Firebase, JWT security, role-based access, booking management, and Google Maps integration.

Warehouse Inventory & Logistics ERP System

<https://github.com/aymanaljamal/ERB-Warehouse-Product-System>

ERP backend system for warehouse inventory, product logistics, order processing, delivery management, and stock tracking using Spring Boot, REST APIs, JPA/Hibernate, and MySQL.

News Headline Classifier

<https://github.com/aymanaljamal/news-headline-classifier>

Machine learning GUI application that classifies news headlines using TF-IDF, Decision Tree, and Logistic Regression, with evaluation metrics and model comparison.

Genetic Password Cracker

<https://github.com/aymanaljamal/genetic-password-cracker>

Educational Python project demonstrating genetic algorithms through password evolution simulation, with Tkinter GUI, convergence visualization, and experiment configuration comparison.

Flat Rental Management System

<https://github.com/aymanaljamal/comp334-flat-rent-system>

Flat rental management web application built with PHP, HTML, CSS, and MySQL for searching flats, managing users, handling rental transactions, appointments, messages, and role-based dashboards for customers, owners, and managers.
